>> Risk and Reward Profile

What does this risk indicator mean?

The above risk indicator ranks potential risk and reward and is based on medium-term volatility (how sharply the Sub-Fund's actual or estimated share price has gone up and down over five years). Historical data, such as that used in calculating this synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The lowest category does not mean a 'risk-free' investment. The Sub-Fund's risk indicator is not guaranteed and may change over time.

For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the share class.

Additional key risks

The risk indicator reflects market conditions of recent years and may not adequately capture the following additional key risks of the Sub-Fund:

Counterparty risk Contract parties may default on their obligations under derivatives contracts entered into with the Sub-Fund.

Credit risk The issuers of bonds held by the Sub-Fund may fail to pay principal or interest due. Higher yielding bonds may carry greater credit risk.

Liquidity risk In adverse market conditions, securities that are liquid may become difficult to value, buy or sell, which could affect the Sub-Fund's ability to process redemption requests.

Operational risk Losses may occur due to human error or omission, process errors, system disruptions or external events.

Derivatives risk Derivatives create leverage in the Sub-Fund and may cause movements in the value of the underlying investments to amplify gains or losses to the Sub-Fund.

Emerging market risk Some of the countries invested in may carry higher political, legal, economic and liquidity risks than investments in more developed countries.
